Dublin City Centre is a much-improved environment thanks to the OSI’s management strategy, which has removed 90% of trucks from the city’s streets. The removal of so many large trucks makes the city centre a more pleasant place to visit and easier to get around.

Dublin City Centre now has two LUAS (tram) lines and much improved priorities for buses, making the city centre even more accessible.

The end of 2009 will see the opening of the extension of Luas Line C1 down to the O2 and in early 2010 the Samuel Beckett Bridge will be open, this bridge will provide an important link on the outer orbital and provide a means for through traffic to bypass the city centre.

Access to all car parks in the city centre is maintained. Use this map to find your way to the

How to get around the inner orbital for cars and light goods vehicles

The samples below will give an idea of how the signage system works:

You are approaching the Inner Orbital at Junction 17. Go straight ahead for N4, N7, M50 and the Airport.
